

DECEUNINCK BOASTS THERMAL IMPROVEMENT

Cincinnati Enquirer
September 07, 2011

Deceuninck North America, the Monroe-based supplier of vinyl window and door components, is introducing a new rigid thermal reinforcement system called Innergy.

The product is the result of a collaboration with polyurethane resin manufacturer Bayer Material Science LLC as part of an exclusive agreement between the two companies.

Filip Geeraert, president and CEO of Deceuninck North America, said, "Innergy is truly the next generation of thermal reinforcements. It offers the same strength and durability of aluminum, but with unprecedented levels of thermal performance."

Developed as a better-performing alternative to aluminum reinforcements for PVC windows and door profiles, Innergy also contains 20 percent bio-based resins, the companies said.
