

Ohio-based Environmental Monitoring Equipment Manufacturer YSI Acquires Utah Company

Yellow Springs, Ohio-based environmental monitoring and testing equipment maker YSI says it has acquired Design Analysis Associates Inc. of Logan, Utah.

Terms of the deal were not disclosed.

Design Analysis Associates, founded in 1971, designs and markets equipment that measure, record, and telemeter hydrological data--most notably the WaterLog datalogger. The company is now a wholly owned subsidiary of YSI.

In a news release, YSI officials said the purchase made sense because both companies include major water resource and environmental monitoring agencies among their largest users.

Because we share many of the same customers in the same water monitoring market, this acquisition is extremely synergistic, said YSI CEO and President Rick Omlor. Members of the Fletcher family will remain in key positions at Design Analysis Associates and the company's products will continue to be marketed under the WaterLog brand name.
