TechSolve Announces Collaboration with Allied Automation

Cincinnati, OH: TechSolve is excited to announce a new collaboration with Allied Automation to better educate manufacturers about the benefits of collaborative robotics, or cobots, and assist manufacturers in the implementation of these technologies. The collaboration will allow TechSolve to help serve Southwest Ohio's 6,500+ manufacturers as their Ohio Manufacturing Extension Partnership (OH MEP).

"TechSolve, Inc. is looking forward to working with Allied Automation, Inc. to support the competitive needs of Southwest Ohio's Manufacturers," said David Linger, President and CEO of TechSolve. Leveraging today's collaborative robotics impacts the bottom line for small-to-medium-sized manufacturers. Through this collaboration, Allied Automation will ensure our clients can implement these technologies following TechSolve's assessment of their operations."

TechSolve will work with manufacturers considering adopting automation technology to assess their process and recommend technology where it generates the most return on investment (ROI) in their process. Allied brings expertise by providing the optimal machine/technology, installation services and training to team members. The relationship features the use of TechSolve's Collaborative Robotic test-bed to aid in educational and training purposes.

"We are very excited to work with TechSolve on this collaboration to further expand our services to Southwest Ohio and help the MEP network strengthen manufacturing in Ohio," said Matt Gonso of Allied Automation. "Through implementation and education, we can showcase to small-to-medium sized manufacturers the benefits and potential applications for collaborative robotics."

As part of this collaboration, they will be hosting an [Intro to Cobots](#) Event on October 23rd from 8:30-11:30 a.m. at TechSolve's facilities. This introductory workshop will help manufacturers understand the benefits and potential applications for cobots and flexible automation. Key topics that will be covered are Lean and Steady Robotics, Site Evaluation, Universal Robotics Programming and more. Future co-hosted events and educational seminars will help ensure manufacturers stay current on these emerging technologies.

About Allied Automation: Allied Automation was founded by Greg Dill in 1981 and has been committed to the cutting edge ever since. Headquartered in Indianapolis, they are a leader in high technology-based manufacturing solutions. Serving the Midwest, Allied Automation is a trusted leader for some of the most advanced solutions available. Partnering with world-class brands and innovative manufacturers to offer the best products and systems around; such as Mitsubishi Electric, Universal Robots and Festo and to offer the best products around.
